

Héctor Manuel Coronado Vargas · HC://

Senior Full-Stack Engineer | Automation, Data Systems & AWS | Node.js · Angular · Python

Mexico City, Mexico · UTC-6 · Remote-ready · International teams | +52 (55) 1631 7091 | hm.covar@gmail.com | github.com/Toydrum | linkedin.com/in/hectormanuelcoronadovargas | toydrum.github.io/HectorCoronadoPortfolio

PROFESSIONAL SUMMARY

Senior Full-Stack Engineer and automation-focused technical consultant with 6+ years building production web platforms, backend services, data pipelines, and cloud-native systems. Strong in Node.js/NestJS, Angular/React, Python, Google Apps Script, n8n/Make.com, AWS, PostgreSQL, MongoDB, Redis, and reliability practices. Recent work includes B2B trade-intelligence systems across a large JavaScript monolith, Knack workflows, a 157k-row Apps Script sync engine, Python data cleanup, Supabase/Instantly integrations, and Angular + AWS serverless architecture.

TECHNICAL SKILLS

Backend & APIs: Node.js, NestJS, Express, Fastify, Django/DRF, Java Spring Boot, REST, GraphQL, WebSockets, gRPC, OpenAPI/Swagger, DTOs, validation, JWT/RBAC.

Frontend: Angular, React, Vue.js, TypeScript, JavaScript, HTML5, CSS3, SCSS, RxJS, NgRx, SSR, responsive UI, API integration, auth/session flows.

Automation & Data Platforms: n8n, Make.com, Google Apps Script, Google Sheets, Knack Builder/API, Instantly, Supabase, SendGrid, Stripe, Python, Pandas, CSV pipelines, ETL/ELT, data normalization.

Cloud, DevOps & Reliability: AWS EC2, S3, CloudFront, Lambda, API Gateway, Cognito, ECS/Fargate, EKS, IAM, CloudWatch, SQS/SNS, EventBridge, Docker, Kubernetes, Helm, Terraform, GitHub Actions, GitLab CI/CD.

Data, Quality & Architecture: PostgreSQL, MySQL, MongoDB, DynamoDB, Redis, RDS/Aurora, BigQuery, Snowflake, OpenSearch, Jest, Cypress, Pact, Pytest, microservices, serverless, event-driven systems, DDD, SOLID/OOP, OpenAI API, LangChain, RAG.

PROFESSIONAL EXPERIENCE

Senior Full-Stack, Automation & Data Engineer · Proceti

Apr 2026 – Present

Client engagement: Simultrayd B2B trade-intelligence platform and operations systems.

- Engineered across four live production surfaces: a Knack customer platform, a Google Sheets/Apps Script trade pipeline, n8n/Make.com automation workflows, and Python/Instantly/Supabase outreach-data systems.
- Stabilized and extended a 25k+ line JavaScript monolith, shipping trade ownership controls, document workflows, catalog-backed matching, CSV tools, UI fixes, and support patches.
- Designed and rolled out a 157k-row Apps Script sync engine with header-name mapping, dirty queues, locks, canaries, before-image logs, rollback paths, and formula-preserving writes.
- Improved high-scale pipeline performance: a staging sweep dropped from ~45–60 s to ~10 s, and a row-move path improved from 29.6 s to 0.64 s (46×) in test validation.
- Built Python and automation pipelines reducing 83,320 raw records to 39,333 enrichment-ready rows; loaded an 8,258-record commodity catalog and backfilled 27,937 connections with zero reported failures.
- Migrated Make.com workflows into n8n blueprints (enrichment, rematching, lead processing, password reset, outreach) using caching, batching, schema validation, webhooks, and JWT/HMAC-style auth.
- Created an Angular + AWS serverless migration architecture (strangler-fig, feature flags, Cognito custom auth, API Gateway + Lambda TypeScript, Aurora Serverless v2, Drizzle, Zod).
- Drove release confidence through adversarial reviews, gated rollouts, 1-row canaries, soak windows, rollback copies, and operational runbooks.

Tech: JavaScript, TypeScript, Angular, Node.js, Python, Google Apps Script, Knack, n8n, Make.com, Supabase, SendGrid, REST APIs, JWT/HMAC, AWS (Lambda, API Gateway, Cognito, Aurora, S3, CloudFront), PostgreSQL, MongoDB, Git.

Software Engineer (Full-Stack & SRE) · Neoris

Apr 2024 – Present

Customer-facing systems in a polyglot microservices architecture.

- Owned backend capabilities across Node.js, Django, and Java Spring Boot services, focusing on integration correctness, service boundaries, reliability, and maintainable delivery.
- Led modernization from Express + tsc to NestJS on Fastify + SWC, improving runtime responsiveness under load and reducing build/test cycle times.
- Built cross-cutting backend concerns: validation pipes, JWT/RBAC guards, logging/tracing interceptors, timeouts, correlation IDs, and request context propagation.
- Strengthened Kafka, SQS, SNS, and EventBridge workflows with idempotent consumers, retry policies, DLQs, and event-driven orchestration.
- Improved PostgreSQL/RDS paths through query/index tuning, transaction hygiene, Redis caching, and rate limiting; raised release safety with Docker, GitHub Actions, CloudWatch, and Sentry.

Tech: NestJS, Fastify, SWC, Node.js, Django/DRF, Java Spring Boot, Angular, PostgreSQL, Redis, Kafka, SQS/SNS, EventBridge, ECS/Fargate, CloudFront/S3, OpenTelemetry, CloudWatch, Sentry, GitHub Actions, Docker, Terraform.

Full-Stack Developer & SRE · Pharmaceutical Company (NDA)

Nov 2023 – Sep 2024

Regulated product environment with backend, frontend integration, cloud, and reliability responsibilities.

- Built NestJS/Express APIs across REST and GraphQL with DTO-based design, validation, pagination/filtering standards, OpenAPI documentation, and consistent error semantics.
- Implemented asynchronous processing with SQS/SNS and BullMQ/Redis to smooth spikes, isolate failures, support retries, and preserve recovery paths.
- Improved PostgreSQL performance with Prisma/TypeORM schema discipline, indexing strategy, transaction hygiene, and Redis-based caching/throttling.
- Operated containerized workloads on EKS/Kubernetes using Helm, HPA, CloudWatch/CloudTrail, Secrets Manager/SSM, KMS, and WAF.

Tech: NestJS, Express, Node.js, Angular, NgRx, RxJS, GraphQL, OpenAPI, PostgreSQL, Prisma, TypeORM, MongoDB, Redis, BullMQ, WebSockets, SQS/SNS, EKS/Kubernetes, Helm, Docker, AWS.

Full-Stack Developer · Independent / Freelance

2019 – Present

End-to-end SaaS, payment, automation, and cloud delivery for independent projects and clients.

- Delivered production-grade SaaS solutions with API design, background processing, webhook-driven integrations, logging/monitoring, and safe rollback practices.
- Implemented Stripe payment and subscription workflows with replay-safe webhooks, durable event tracking, reconciliation logic, and analytics-friendly event storage.
- Built Angular/Vue/Django applications, REST APIs, serverless utilities on AWS Lambda, and Docker-first development workflows.

Tech: Django, Angular, Vue.js, Node.js, Docker, AWS EC2/S3/CloudFront/Lambda, Stripe, MongoDB, REST APIs, Git.

SELECTED PROJECTS

- **Portfolio** — interactive Angular 21 site (signals, zoneless, hand-rolled effects), CI/CD to GitHub Pages: toydrum.github.io/HectorCoronadoPortfolio
- **ZoolandingPage** — conversion-focused landing-page product, Angular 22 in production: zoolandingpage.com.mx
- **LyricMaker** — Django + Angular application with Docker, AWS Lambda, S3, and LLM integration for lyric/script generation and analysis.
- **SaaS Billing System** — Django + Vue.js billing platform with Stripe subscriptions, webhook workflows, MongoDB event storage, and AWS deployment.

EDUCATION & CERTIFICATIONS

- Diploma in Data Science — BEDU, 2025
- Backend with Node.js & Stripe — Coderhouse, 2023
- Audio Engineering — Fermatta Academy, 2008–2014
- Full Stack Development — Coderhouse, 2023
- React & Angular Specializations — Platzi/Coderhouse, 2023
- Languages: Spanish (native) · English (professional)
